## Custom Made Abdominal Binder

Used for:

Abdominal Hernia  
Incisional Hernia

Made with powernet fabrics to provide circumferential pressure to extreme body shapes.

Traditional binders are made with a wide stiff elastic which addresses the largest circumference well. If the area above and below are smaller, often these areas do not receive adequate pressure.

TSL Custom made abdominal binders are made with various layers of powernet, which is darted to follow the contour of the body creating a shell which supports the Hernia and surrounding area. The anterior aspect is made with a double layer and single posterior panel. This binder cannot be open and stretched onto the body. The Velcro opening is located at the posterior. Therefore the binder must be donned in a sitting position and pulled up into position. To doff the binder, simply reach to the centre back and undo the Velcro. Garment is easily laundered and dries quickly.

Soft lycra panels may be added for stoma openings

### Measuring Instructions
